

Rope Bag 50M/70M

p/n RB50-10
p/n RB70-10

Rope Bag 50M/70M is a semi soft bag intended to store a Guide Line/trial line used for helicopter hoist operation. The Rope Bag is available in two sizes, one for a 50meter Guide Line and one for a 70meter Guide Line. The bag has an upper stainless D-ring for attachment to the rescue swimmer's harness when the Guide Line is to be deployed from the ship or ground by the rescue swimmer. On the outside of the bag is a pocket to store the guide line weight. The bottom is made of flat reinforced rubber with drain holes which makes the bag stable in upright position on ground or ship deck and makes it easy to pack the guide line after use. On one side is a handle to make it easy to grab by one hand. On the outside is a highly visible reflective band.

In the lower end of the bag is a webbing loop intended to attach the bag to the cabin floor when it's stowed or used by the hoist operator.
